

Injurious Insects.

There are few things more humiliating to humanity than the sense of man's helplessness before very small insects. Tigers or wolves we can exterminate easily enough, if we really set ourselves to work at it; rats, mice and weasels we can keep down somehow. But before the Colorado beetle, or the severe, ten-year locust we are practically all resourceless. And before the phylloxera or the hop-fly we can hardly do more than look on regretfully with folded hands. Yet it is some consolation to reflect that what seems at first sight a useless and purely ornamental science can help us to some extent in dealing with these infinitesimal pests. The only way to conquer them, if we think at all, is to learn their whole life-history; to know them in the egg, in the larva, in the pupa, in the full-fledged insect; to crush them in every stage with whatever weapon the subtleties of chemistry or more ingenious brute force can suggest; and to do nothing which in any way give them a single extra chance of life. Nothing, in fact, could better show the intimate interaction and reaction of knowledge and practice than this interesting study. On the one hand, no means can be devised for getting rid of injurious insects except by a thorough scientific acquaintance with their origin and metamorphoses; on the other hand, no such careful observations on particular life-histories have ever been undertaken, probably, except with the stimulus of some practical attempt to mark them down. This science and agriculture both gain by the conjunction. Even butterfly-hunting has its special commercial uses, when the butterfly turns out to be the parent of the gossamer caterpillar, or to lay the eggs from which a warm sun will hatch out the destructive cabbage-worm.

Many of these observations help to bring out the minute interaction which often obtains between different parts of the organic balance; so that if we want to exterminate a particular insect, we must sometimes begin by encouraging or repressing some seemingly unconnected bird or plant. For example, botanists have long known that wet seasons are particularly favorable to charcoal, and that after two or three such seasons the fields, unless diligently weeded, are yellowed all over with its light blossoms. But the charcoal is apparently the native food-plant of turnip fly, from which the insect spreads easily to the cultivated turnip—a closely allied artificial form; much as the Colorado beetle, originally parasitic on a salubrious in the Rocky Mountains, took readily to the richer food of the very similar potato vines, as soon as extended tillage began to approach its natural habitat.

It is only by such careful observation, with practical application of the results, that we can hope to control the insect foes; for the more widely any particular crop is grown, the more generally can its natural enemies spread and survive. Even in England, where hill and dale, copse and hedge break up the tith, and where small fields of various staples are habitually much intermixed, the insects can easily migrate from patch to patch of their special food-plant; while in America, where the same crop sometimes covers hundreds of square miles together on the unfenced and unbroken plain, locusts and army worms can march straight across country, day after day, in regular battalions.—*St. James's Gazette.*

Growth of Colts.

In order to winter a colt well, and have him come out a fine, sturdy animal in the spring, particular attention must be paid to his growth during the first summer and autumn. If the mare's milk is at all deficient to keep the colt in good flesh and thriving steadily, it is best to have recourse at once to cow's milk. Skimmed milk answers well for this purpose, especially if a little flax-seed jelly, oil or cod-liver meal, is mixed with it. A heaped tablespoonful, night and morning, is enough to begin with, when the colt is a month old. This can be gradually increased to a pint per day, by the time it is six months old, or double this if the colt be of the large farm or Cart Horse breed.

Oats, also, may be given as soon as they can be cut. Begin with a half-pint, night and morning, and go on increasing, according to the age and size of the animal, to four quarts per day. These, together with the meal above, should be supplemented with a couple of quarts of wheat bran night and morning. The latter is excellent to prevent worms, and helps to keep the bowels in good condition.

Colts should not be permitted to stand on a plank, cement, paved or any hard floor the first year, as these are liable to injuriously affect the feet and legs. Unless the yard where colts run in the winter has a sandy, or fine, dry, gravelly soil, it should be well littered, so as to keep their feet dry. Mud, or soft, wet, fishy ground, is apt to make tender hoofs, no matter how well bred the colt may be. One reason why the horses in one district grow up superior to those in another, is because of the dry, limestone or siliceous soil. When the mare is at work, do not let the colt run with her; and if she comes back from her work heated, allow her to get cool before suckling the colt, as her over-heated milk is liable to give the foal diarrhoea.—*National Live Stock Journal.*

Hop Statistics.

New York State has 9,765 growers of hops, who cultivated 39,072 acres in the crop, with a product in 1879 of 21,628,931 pounds. Next comes Wisconsin with 2,317 growers, 4,138 acres in the crop, and a product of 1,965,427 pounds; then California, with 89 growers, 1,119 acres, and 1,444,077 pounds production; Washington Territory, with 55 growers, 534 acres in hops, and a crop of 703,277 pounds; Michigan, 493 growers, 400 acres in the crop, and a product of 266,100 pounds; Oregon, 70 growers, 304 acres in the crop, and 241,371 pounds product. Of the New England States Vermont takes the lead, with 214 growers of hops, 265 acres under the crop, and a yield of 199,350 pounds; Maine comes next, with 141 growers, 219 acres in hops, and a crop of 48,214 pounds; then New Hampshire, with 54 growers, cultivating 36 acres, and securing 23,955 pounds; and Massachusetts, with 82 growers, 23 acres in hops, and a yield of 9,895 pounds. Only eighteen States raise hops for the market, and of these, five raise less than 10,000 pounds each.—*N. Y. Times.*

The American wonder or premium gem peas sown in August will, if they escape mildew, make a fair autumn crop. Much every way depends upon the weather for success, and from our own experience we prefer August to July. Mold, indeed, the weeds make a very nice fertilizer. The ground should be likely and deeply pulverized.—*N. Y. Herald.*

RELIGIOUS AND EDUCATIONAL.

—Kansas boasts four women among her County School Superintendents. —The membership of the Protestant Christian Church in Syria has doubled within the last five years. —In India there are no less than thirty-four different Protestant Missionary Societies. Of these twenty-three are European and eleven American. —Mrs. Josephine Louise Newcomb, of New York, has contributed \$20,000 to the library building fund of Washington and Lee University, Lexington, Va. Her late husband, Warren Newcomb, a few years ago gave \$10,000 for the same object.—*N. Y. Herald.*

—Concerning the ringing of church bells, the *Christian at Work* says: "If some people don't like the ringing, cotton is still abundant, and a supply can easily be had for filling the cavity of the auricular tragus and lobule, so as to exclude the vicious vibrations of the terrible ecclesiastical tocsin."

—Rev. Dr. Burns, the Canadian "heretic" who sinned by writing a letter of sympathy to Dr. Thomas, of Chicago, and expressing agreement in his views, has been unanimously expelled by the Western Methodist Church of Canada, which does not see wherein he is guilty of heresy.—*Springfield (Mass.) Republican.*

—In Baltimore, Md., a handsome new Methodist Episcopal Church has been dedicated in memory of Robert Strawbridge, the first preacher of that denomination in America. The desk is made of wood taken from the first church built by Mr. Strawbridge in Carroll County, Md., in 1794, and the other pulpit furniture from the oak tree under which he preached before there was any "meeting house."—*St. Louis Globe.*

—The doctrine of sinless perfection was discussed in the General Assembly of the Cumberland Presbyterian Church, lately held at Huntsville, Ala. Some congregations of this denomination have gone as far as the Free Methodists in professions of perfect living. A revision committee advised that liberty of conscience be allowed on that subject, but by a large vote the following was adopted: "The doctrine of sinless perfection is not authorized by the Scriptures, and is a dogma of dangerous tendency."—*N. Y. Sun.*

The Wolf as a Reformer.

One day a Wolf, who had been pondering deeply for a whole week, started out on a walk through the Forest. Meeting a Jackal, he said: "My friend, pause for a little time while I give you a few words of advice. You are a cross, snarling creature, hated by men and despised by all the Creatures of the Forest. Let me hope that you will mend your ways and reform."

"Hol! hol! hol! but you are a pretty specimen to give me advice," snarled the Jackal. "Why, it isn't a month since you devoured an old woman and chased a Professor of Eloquence into the River!"

The Wolf passed on until he met a Hyena. By that time he had recovered his cheek and he worked up a sad, sweet smile and observed:

"My dear Mr. Hyena, you would be an ornament to society if you would cut your nails and clean your ears. Let me hope that you will cease your depredations and become an honest, conscientious animal."

"That's nice talk from an old wretch who lies in ambush for children!" replied the Hyena. "Why, if I was half as mean as you are I'd want some d—ing Jack-Rabbit to kick me to death!"

The Wolf next met a Fox, and after the usual salutations regarding the backward condition of the crops the Reformer began:

"My Friend, I feel it my duty to advise you to quit stealing spring chickens and get your living in an honest manner. Show the world that you want to be good and respectable and you will soon be beloved and honored."

"Tally!" grunted Reynard—"tally on a chip! You old villain, you'd better cut up with some of the dozen murders you have committed!"

The Wolf next met an Owl, and when they had compared notes on the Malley trial the Reformer said:

"My dear friend, why is it that neither the Jackal, the Hyena nor the Fox will receive my advice to reform?"

"My venerable fellow traveler," slowly replied the Owl, "reform should begin at home. Wash up—get rid of your bad breath—clean out your den—quit stealing and murdering—drill some decency into your own family, and then come and see us."

MORAL: It is the men in State Prison who most lament the wickedness of outsiders.—*Detroit Free Press.*

The Survey of Eastern Palestine.

Captain Conder and Lieutenant Mantell, R. E., have returned from their first campaign in Eastern Palestine, bringing with them the results of their work. These include the map of a large district, covering five hundred square miles of country, with a very large quantity of notes, plans, drawings and photographs concerning the antiquities of Moab and Gilead. Captain Conder will proceed at once to arrange these materials for publication. He has also brought with him a considerable quantity of notes, and additional information made by himself and his party in Western Palestine. These will be included in the next volume of the society's great work, which will be delayed a month or two on their account. During the recent visit of the Royal Princes to Palestine, Captain Conder had the honor of accompanying their Royal Highnesses throughout their tour, which lasted nearly six weeks, and extended over all Western Palestine, and over a great part of the country east of Jordan. The haran at Itebron was also explored, and a plan and description were prepared by Captain Conder, to be submitted to the Royal Highnesses the Prince of Wales.—*London News.*

Accident in a Sulphur Mine.

The *Gazette Picnoise* reports a terrible accident in one of the sulphur mines at Calais, in Sicily. The rope by which a wagon heavily laden with sulphur was being drawn up an incline out of the "Tumminelli" pit suddenly snapped. The wagon thereupon commenced descending again, and there being no possibility of stopping it, the wagon rushed at a tremendous speed to the bottom of the pit, and was instantly dashed to pieces. Owing to the high friction the sulphur burst into flames, with the most disastrous results to the miners, who were at work at the time. As soon as the fire was extinguished there were no fewer than thirteen dead bodies taken out of the pit, the victims having all been suffocated and burned to death. There were, in addition, upward of thirty miners who had received injuries, chiefly burns of a more or less serious character.

"DON'T DIE IN THE HOUSE."

"Rough on Rats." Clears out rats, mice, roaches, bed-bugs, flies, ants, moles, chipmunks, gophers. 15c. per box.

"RUCHUPAIRA."

Quick, complete cure, all annoying Kidney, Bladder and Urinary Diseases. \$1 Druggists. Depot, Prentice & Evenson, Janesville.

SCIENTIFIC MISCELLANY.

The air of London during a fog is found to contain a large excess of carbonic acid over the normal proportion.

The newly-completed observatory on Mount Etna is 9,000 feet above the sea level, and the clearness of the atmosphere at that height leads astronomers to expect some important observations.

The Chinese in Hong Kong are reported to practice vaccination so thoroughly and effectually that smallpox never spreads there, although no port in the world is more liable to a visitation of the disease.

In an experiment by M. Paul Bert upon a live crocodile, the animal, being made to forcibly close its mouth, exerted a pulling force of 308 pounds upon a rope attached to the end of its upper jaw. The extremity of the jaw being the end of a long lever, the real power exerted by the muscles was much greater, and was computed to be 1,640 pounds. This experiment was made upon a crocodile already weakened by cold and fatigue.

A year or more ago a gate-post which had been painted with so-called zinc-white was noticed to appear black all day, gray in the twilight and white during the night, changing black very soon after sunrise. Mr. T. L. Phipson was led to investigate this singular phenomenon property of the paint, and after much research has shown the cause to exist in a new metal, which has been named actinium, on account of its peculiar actinic effects. It is found in zinc ores, and resembles zinc.

Attention has been called to some new fact in relation to color-blindness. Careful investigations have shown the Chinese and the Nubians to be practically free from this defect. Dr. Roberts has observed that color-blindness is most common among persons of reddish or red hair, and it is very prominent among the Jews, who are the most decidedly red-haired of all known races. It is thought probable, therefore, that there may be some correlation of color-blindness with pigmentation, and indirectly with racial peculiarities.

A SCHOOL-MASTER of Nice has formed among his pupils a society for the protection of vegetation. The members are to destroy injurious larvae and protect harmless birds. Their interest in the work is kept up by the election of laureates and the award of prizes. In four months of 1881 the children destroyed 4,555 beetles of moth eggs, representing no fewer than 1,038,600 larvae; 194,225 cabbage larvae, 1,583 grasshoppers, 320 butterflies, 53,011 slugs and snails, 1,274 grubs, and 35,712 insects of various kinds. The work is both very valuable and very instructive.

Sounds produce in certain individuals the impression of color. This curious phenomenon, which was first described by Nussbaumer in 1873, has recently been made the subject of systematic study by Heron, Bleuler, and Lehmann, of Zurich. They find that the colors associated with different notes differ with the individuals, being as a rule light for high notes and dark for low notes. Chords either cause the colors which correspond to their notes to appear to the mind side by side, or give a mixture of those colors. The same note in different keys changes in color, and to many persons different colors appear when the same piece is played by different instruments. "Mozart," as well as musical notes, are accompanied by colors, varying with the intensity and pitch of the sound. Of 596 individuals examined, one-eighth were "color-hearers." Four persons perceived sound as a result of sensation of light and color. A broad, quietly burning gas flame led to the perception of a sound formed of *w* and a light vowel *e*; but when the flame flickered the sound became that of *t*. (These cases can generally be explained by an association of sounds with colors by the individual minds, and the phenomenon is largely hereditary.)

Jay Gould's Son as a Pugilist.

Young Gould is becoming quite a man-about-town, and may be seen at boxing matches and similar places of amusement. His tastes are so strong in this direction that he is under the instructions of a professional pugilist, Billy Madden, in the early art of self-defense. This may not be altogether to his advantage, as his father's fortunes may have suggested it as a wise precaution. This expert does double duty. Besides instructing young Gould in his art he shadows Jay Gould himself, and the man who would attempt to waylay the railroad magnate would fall into horny hands. This nervousness on the part of Mr. Gould dates from the time Major Selover arranged himself by picking him up and throwing him over the railing in front of a barber-shop. He has not yet recovered from the fright, although he and Major Selover were friends again within a year.

After Eight Long Years.

C. C. Jacobs, 78 Folsom Street, Buffalo, writes that for eight long years he had tried known remedy to cure him piles, also had been treated by physicians without success, when he was ultimately cured by the following prescription: For sale by Palmer & Stevens and Sherer & Co.

MISCELLANEOUS.

T. L. KELLY CO.'S 89 AND 91 WISCONSIN ST.

Thanks to our many patrons, we are able to announce that our season's trade has been very SATISFACTORY!

Leaving our stock in fine condition, nearly all goods adapted to spring trade being cleaned out. The few we have left we have marked down to HALF PRICE.

And less to close, our plan being to make each season clear out its own goods.

During the month of July we shall open NEW BARGAINS DAILY!

At this season of the year manufacturers and importers are anxious to close out their seasonal goods at almost any price, and the fact that our patrons permit us to clear out our trade enables us to take hold of these lots. We always give our customers the full.

Of these bargains. The people know that in the past we have given the BEST VALUE of any house in the West in all kinds of

BENEFIT DRY GOODS!

Fancy Goods, Notions, Books, Music, Magazines, etc., and the good work shall go on. We shall continue to undersell all competitors. The people who trade with us can only get their goods at the very lowest figures at which they can be sold, and at 21 to 30 per cent. less than other houses ask for them. Ladies who prefer to do their shopping in the cool of the evening should remember that they will not be hurried at our store, as we do not close until 7 o'clock any evening. Saturday evenings open until 8 o'clock.
